PATIENT INFORMATION GUIDE

COMPLETE TREATMENT PATHWAYS

Specialties, procedures, international patient planning and recovery guidance in one A5 handbook.

HOSPITAL CARE
Yatharth Super Speciality Hospitals

INTERNATIONAL PATIENT SUPPORT
MedTreat India

WELCOME

One guide. Every major care pathway.

A clear starting point for patients and families comparing treatment in India.

What this guide covers

- 34 Yatharth specialty areas
- 32 named procedures in the current Yatharth directory
- 18 treatment categories supported on MedTreat India's patient platform

Built for orientation, not self-diagnosis

Use this guide to organize questions, reports and travel plans. A registered doctor must confirm diagnosis, treatment, eligibility, risks and recovery time.

Estimates are case-specific

Hospital stay, implants, medicines, ICU needs, companion stay and follow-up vary by patient. Ask for a written estimate with inclusions, exclusions and validity.

Scope verified against current directories on 12 September 2026.

CONTENTS

Find the pathway you need

The booklet moves from choosing care to treatment planning, travel and follow-up.

04-06	How the care journey works
07-08	Complete speciality directory
09-10	Current procedure directory
11-30	Speciality care pathways
31	Transplant pathway and legal review
32	Understanding a package estimate
33	Medical travel checklist
34	Hospital stay and follow-up
35	Locations, contacts and sources
36	Back cover

CARE PARTNERSHIP

Who does what?

Clear roles help patients know where medical decisions end and coordination support begins.

Yatharth Hospital

- Doctor consultation and clinical review
- Diagnosis, treatment plan and consent
- Surgery, medicines, nursing and diagnostics
- Hospital estimate and final billing
- Discharge summary and clinical follow-up plan

MedTreat India

- Organizes reports and case information
- Coordinates hospital or doctor opinion requests
- Helps patients compare practical pathways
- Supports estimate discussion and travel planning
- Assists communication before and after treatment

Important

MedTreat India is a medical travel assistance platform. It does not diagnose, prescribe, guarantee outcomes or replace direct advice from the treating hospital.

PATIENT JOURNEY

From first message to follow-up

A typical pathway has six decision points. Complex cases may need extra reviews.

01

Share reports

Diagnosis notes, scans, current medicines and key questions.

02

Clinical review

A hospital team reviews the case and may request more tests.

03

Plan and estimate

Confirm recommended treatment, doctor, hospital unit and written scope.

04

Prepare travel

Arrange medical visa, companion, funds, stay and translated records.

05

Treat and recover

Complete evaluation, consent, procedure and early rehabilitation.

06

Follow up

Carry discharge records and confirm remote or in-person review timing.

BEFORE REVIEW

What to send first

Good information produces a more useful clinical opinion and a more realistic provisional estimate.

Patient summary

- Full name, age, sex and country
- Main diagnosis and symptoms
- Relevant medical history and allergies

Medical records

- Recent doctor notes and discharge summaries
- Lab reports with dates and units
- Imaging reports plus DICOM files when available

Current treatment

- Medicines with dose and frequency
- Previous procedures, surgery or chemotherapy
- Dialysis details or implant information, if relevant

Planning details

- Preferred travel window
- Patient and companion passport copies only when needed for hospital invitation
- Three questions you most want the doctor to answer

Share records through an approved secure channel. Do not send passwords or unrelated identity documents.

TREATMENT DIRECTORY

Speciality directory

Centres of Excellence and other speciality services listed by Yatharth.

1. Medicine
2. Cardiology
3. Neurosciences
4. General Surgery
5. Nephrology & Urology
6. Paediatrics
7. Gastroenterology
8. Pulmonology
9. Gynaecology
10. Orthopaedics & Spine
11. Plastic, Reconstructive & Cosmetic Surgery
12. ENT
13. Endocrinology
14. Critical Care
15. Neurointervention
16. Dermatology
17. Nuclear Medicine

TREATMENT DIRECTORY

Speciality directory

Continued. Availability can differ by hospital location and doctor roster.

18 Cancer & Bone Marrow Transplant

19 GI Surgery & Liver Transplant

20 Robotic Surgery

21 Kidney Transplant

22 IVF

23 Emergency Medicine

24 Ophthalmology

25 Dentistry

26 Psychology & Psychiatry

27 Physiotherapy & Rehabilitation

28 Anaesthesiology

29 Radiology

30 Pathology & Laboratory Medicine

31 Nutrition Health

32 Interventional Spine

33 Transfusion Medicine & Cellular Therapy

34 Rheumatology

PROCEDURE DIRECTORY

Procedure directory

Named procedures in Yatharth's current public procedure directory.

1. Liver Transplant
2. Kidney Transplant
3. Bone Marrow Transplant
4. CAR T-cell Therapy
5. Cochlear Implant
6. Endoscopy
7. Bariatric Surgery
8. Gallbladder Removal
9. Hip Replacement
10. Laser Treatment for Piles
11. Hysterectomy
12. Colonoscopy
13. ACL Reconstruction
14. Robotic Hernia Surgery
15. Coronary Angiography
16. Radiation Therapy

PROCEDURE DIRECTORY

Procedure directory

Continued. A doctor must confirm whether a procedure is suitable for your case.

17 Myomectomy

18 Thrombectomy

19 Angioplasty

20 Knee Replacement

21 Chemotherapy

22 Coronary Artery Bypass Grafting

23 Appendectomy

24 Arthroscopy

25 Liposuction

26 Anterior Cervical Discectomy & Fusion

27 Circumcision

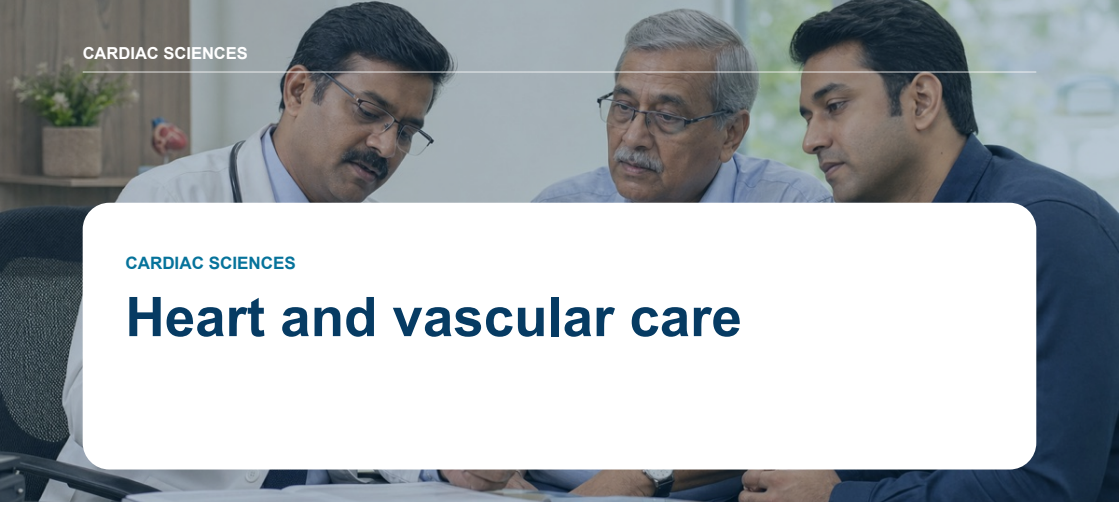

28 Lip Reduction

29 Deep Brain Stimulation

30 Spirometry

31 Polysomnography (Sleep Study)

32 Abdominoplasty (Tummy Tuck)

CARDIAC SCIENCES

Heart and vascular care

For chest pain, blocked arteries, valve disease, rhythm problems or surgical review, begin with a cardiology assessment and current investigations.

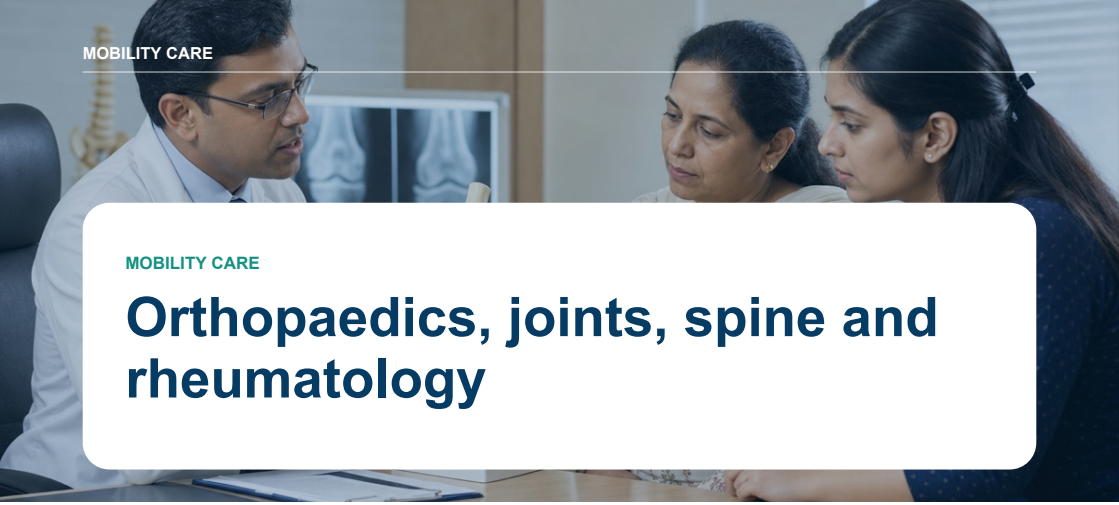

Common pathways

- Cardiology consultation and second opinion
- ECG, echocardiography and relevant blood tests
- Coronary angiography and angioplasty
- CABG and valve surgery assessment
- Thrombectomy or vascular review when indicated

Bring for review

- Recent ECG and echocardiogram
- Angiography images and report
- Medication list, including blood thinners
- Cardiac surgery or stent records
- Kidney function and diabetes results

Emergency chest pain, breathlessness, fainting or stroke symptoms require urgent local emergency care.

MOBILITY CARE

Orthopaedics, joints, spine and rheumatology

Care may include non-surgical management, image-guided treatment, rehabilitation or surgery depending on pain, function and imaging.

Common pathways

- Knee and hip replacement evaluation
- Arthroscopy and ACL reconstruction
- Fracture and sports injury care
- Interventional spine and ACDF review
- Rheumatology assessment for inflammatory disease

Planning questions

- Is surgery necessary now?
- What implant or technique is proposed?
- How long is protected walking required?
- What rehabilitation is included?
- When is air travel safe after surgery?

Ask whether implant cost, physiotherapy, walking aids and thrombosis prevention are included in the estimate.

BRAIN AND SPINE

Neurosciences and neurointervention

Neurology evaluates brain, nerve and muscle conditions; neurosurgery and neurointervention address selected surgical or catheter-based problems.

Common pathways

- Stroke, epilepsy and movement disorder review
- Brain or spine tumour assessment
- Deep brain stimulation evaluation
- Neurointerventional thrombectomy
- Complex spine and nerve surgery review

Bring for review

- MRI or CT reports plus image files
- EEG, EMG or nerve-conduction results
- Symptom timeline and video, if useful
- Current anti-seizure or neurologic medicines
- Previous surgery and pathology records

New weakness, facial droop, speech trouble, severe sudden headache or loss of consciousness is an emergency.

CANCER CARE

Oncology, BMT and cellular therapy

Cancer care is multidisciplinary. The correct pathway depends on confirmed pathology, stage, previous treatment, organ function and patient goals.

Treatment pathways

- Medical oncology and chemotherapy
- Surgical oncology assessment
- Radiation therapy and nuclear medicine
- Bone marrow transplant evaluation
- CAR T-cell therapy review for eligible cases

Essential records

- Biopsy and pathology report; blocks/slides if requested
- PET-CT, CT or MRI images and reports
- Treatment summary and chemotherapy details
- Molecular or genetic test results
- Recent blood counts, liver and kidney tests

No outcome, response rate or total cost can be confirmed without specialist review and staging.

DIGESTIVE HEALTH

Gastroenterology and endoscopy

Digestive symptoms may require medical evaluation, imaging, endoscopy or surgery. Start with a clear symptom and investigation history.

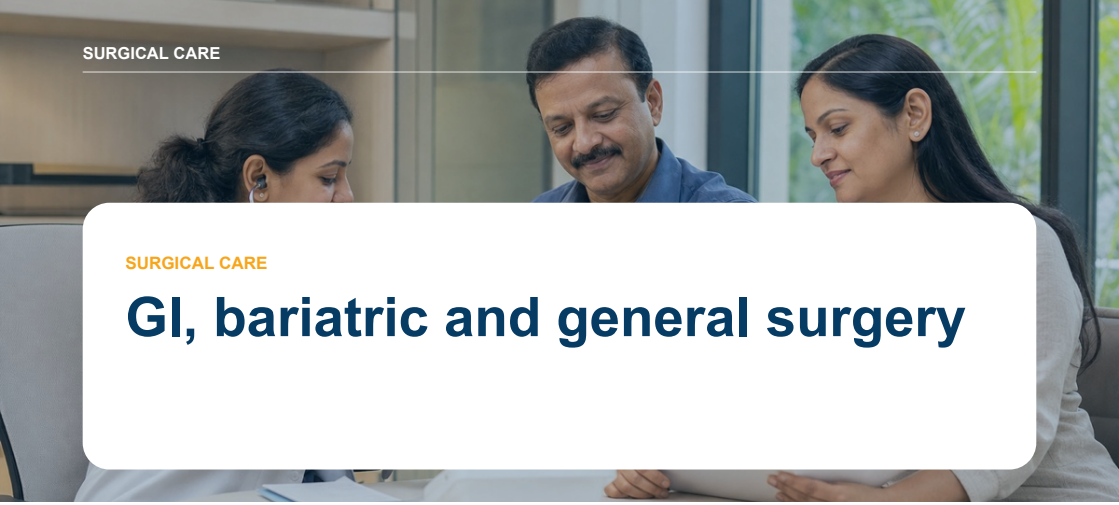

Common pathways

- Upper GI endoscopy and colonoscopy
- Liver, pancreas and bowel disease review
- Inflammatory bowel disease assessment
- Gallstone and reflux evaluation
- Nutrition and medication planning

Bring for review

- Endoscopy or colonoscopy reports and images
- Biopsy or pathology results
- Ultrasound, CT or MRI reports
- Liver function and viral marker results
- Current diet, symptoms and medicines

Ask whether bowel preparation, anaesthesia, biopsy, pathology and post-procedure observation are included.

SURGICAL CARE

GI, bariatric and general surgery

General and GI surgery may be open, laparoscopic or robotic. The approach depends on diagnosis, complexity, previous surgery and surgeon review.

Common procedures

- Bariatric or metabolic surgery
- Gallbladder removal
- Appendectomy
- Hernia repair, including robotic options
- Laser treatment for piles

Estimate checklist

- Surgeon and anaesthesia fees
- Operating room and consumables
- Staplers, mesh or special devices
- Room or ICU category and included days
- Dietician and post-discharge follow-up

Weight-loss surgery requires nutritional, medical and psychological assessment plus long-term follow-up.

TRANSPLANT CARE

Liver transplant pathway

Liver transplant assessment considers disease severity, anatomy, infection status, cancer criteria when relevant, donor suitability and legal approval.

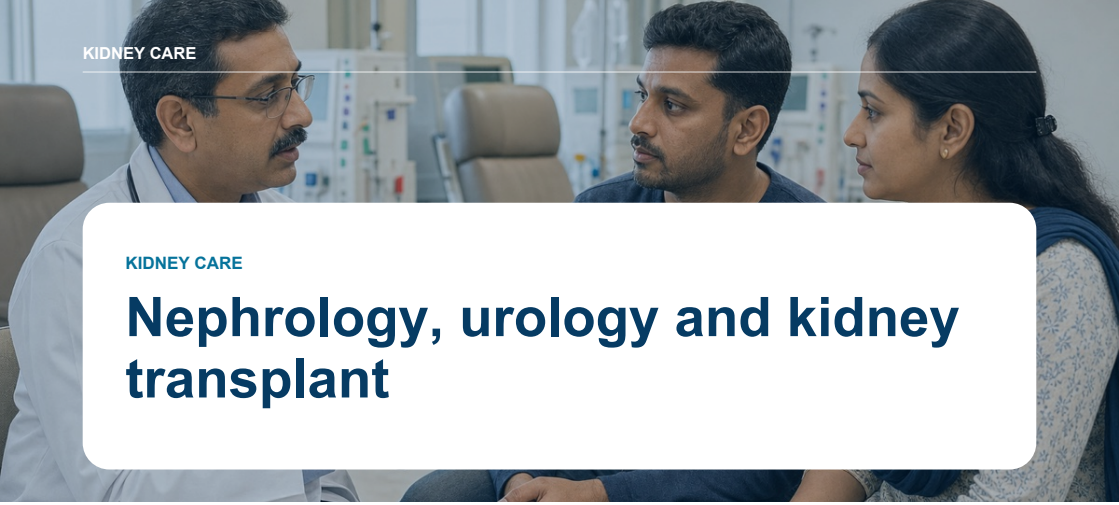

Recipient review

- Diagnosis and MELD-related laboratory data
- CT or MRI liver imaging
- Endoscopy and cardiac assessment
- Infection and cancer screening
- Prior admissions and complication history

Donor and planning

- Potential living donor details and relationship
- Blood group and initial health history
- Independent donor evaluation and consent
- Hospital authorization process
- Expected local stay and follow-up schedule

Donor eligibility, legal approval, timing and package scope are decided only by the transplant team and authorities.

KIDNEY CARE

Nephrology, urology and kidney transplant

Care ranges from medical kidney disease and dialysis planning to stone, prostate and reconstructive urology, as well as transplant evaluation.

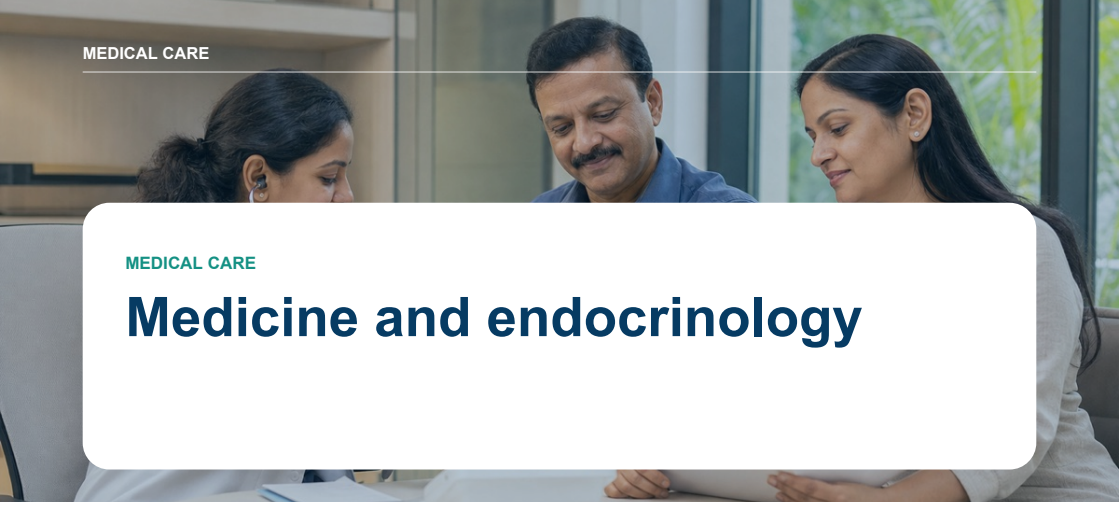

Common pathways

- Chronic kidney disease and dialysis review
- Kidney transplant evaluation
- Stone and urinary obstruction treatment
- Prostate and bladder assessment
- Urologic surgery and follow-up

Transplant records

- Dialysis schedule and access details
- Blood group and recent infection screening
- Potential donor relationship and health summary
- HLA or crossmatch reports, if already done
- Cardiac evaluation and current medicines

Never stop dialysis or immunosuppressive medicine without direct instructions from the treating team.

MEDICAL CARE

Medicine and endocrinology

Internal medicine coordinates complex adult conditions. Endocrinology focuses on hormone and metabolic disorders that can affect treatment readiness.

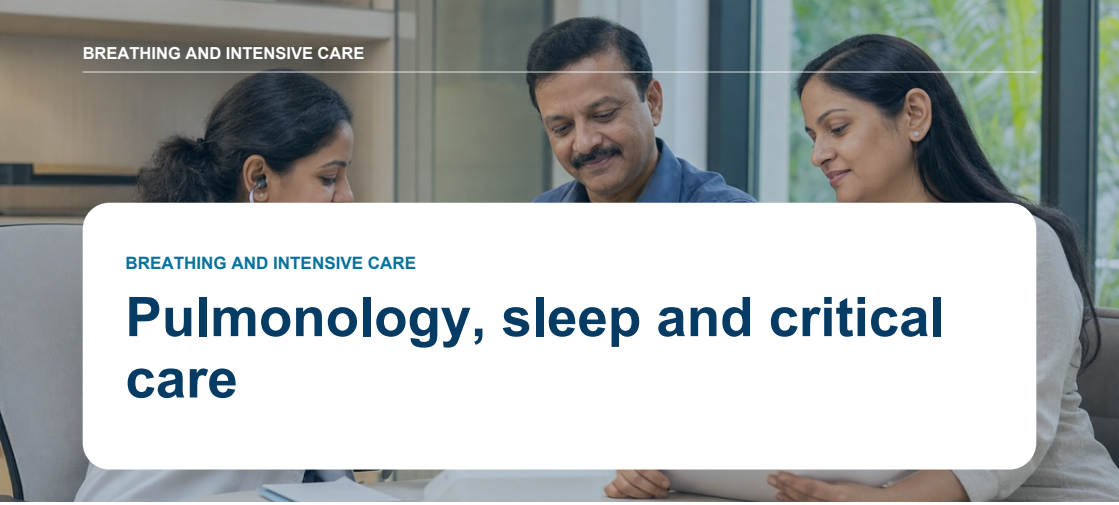

Common pathways

- Diabetes and hypertension management
- Thyroid, adrenal and pituitary disorders
- Metabolic and electrolyte problems
- Fever, infection and multisystem assessment
- Pre-operative medical optimization

Bring for review

- Recent laboratory trends, not only one result
- Home blood pressure or glucose records
- Medicine list and allergies
- Previous admissions and diagnoses
- Relevant scans and specialist notes

Medication changes should be made by a clinician who knows the patient's full history.

BREATHING AND INTENSIVE CARE

Pulmonology, sleep and critical care

Pulmonology evaluates lungs and sleep-related breathing; critical care supports unstable or high-risk patients within hospital care.

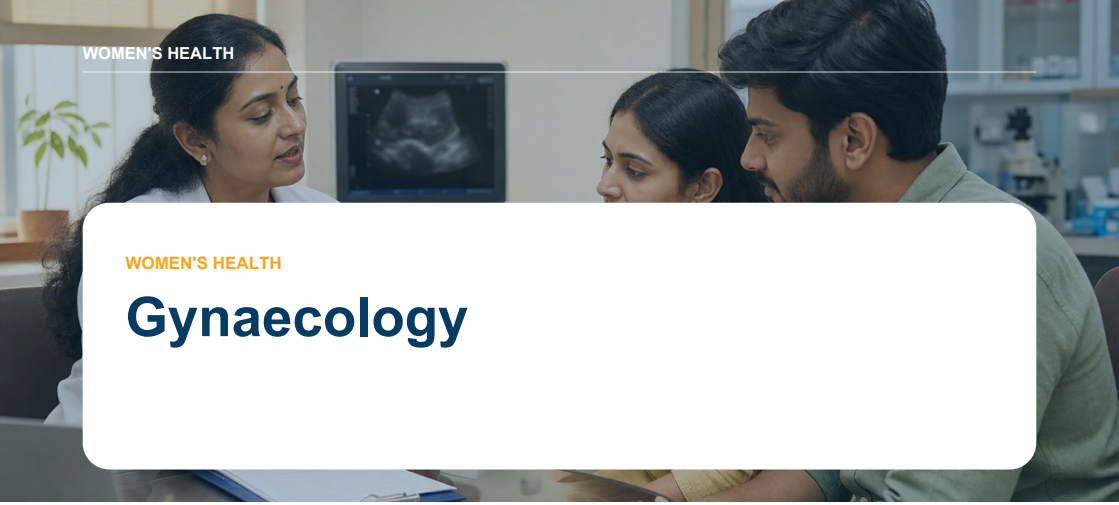

Common pathways

- Asthma, COPD and infection review
- Spirometry and lung-function testing
- Sleep study for suspected sleep apnoea
- Bronchoscopy or chest imaging review
- Critical care planning for complex surgery

Bring for review

- Chest CT or X-ray images and reports
- Spirometry or sleep study results
- Oxygen use and saturation records
- Smoking and exposure history
- Current inhalers and medicines

Severe breathlessness, blue lips, confusion or low oxygen requires immediate emergency assessment.

WOMEN'S HEALTH

Gynaecology

Gynaecology care spans diagnosis, medical treatment and surgery for uterine, ovarian and pelvic conditions.

Common pathways

- Hysterectomy assessment
- Myomectomy for fibroids
- Endometriosis and pelvic pain review
- Abnormal bleeding evaluation
- Minimally invasive or robotic gynaecologic surgery

Bring for review

- Ultrasound or MRI pelvis
- Pap smear and biopsy reports
- Blood counts and hormone tests
- Pregnancy and surgery history
- Fertility goals and current medicines

Ask how the proposed treatment may affect fertility, menopause, recovery and future screening.

REPRODUCTIVE CARE

IVF and fertility

Fertility treatment should follow an individual assessment of both partners, prior cycles, age, diagnosis and reproductive goals.

Common pathways

- Fertility consultation and diagnostic work-up
- Ovulation induction or IUI review
- IVF or ICSI planning
- Embryology and genetic-testing discussion
- Fertility preservation counselling

Bring for review

- Prior cycle summaries and embryology records
- AMH and other hormone tests
- Ultrasound and tubal evaluation
- Semen analysis
- Relevant genetic or infection screening

Success cannot be guaranteed. Confirm consent, medicine, lab, freezing, storage and follow-up costs in writing.

CHILDREN'S CARE

Paediatrics and neonatal pathways

Children need age-appropriate assessment, dosing, consent and family-centred planning. Complex cases may involve several paediatric specialties.

Common pathways

- General paediatric consultation
- Neonatal and high-risk infant care
- Paediatric surgery review
- Growth, nutrition and developmental support
- Vaccination and preventive care

Bring for review

- Birth and neonatal history
- Growth chart and vaccination record
- Current weight and medicine doses
- Prior admission and surgery records
- Scans, laboratory results and school concerns

For a sick child with breathing difficulty, dehydration, seizures or reduced responsiveness, seek urgent local care.

HEARING AND AIRWAY

ENT and cochlear implant

ENT evaluates ear, nose, throat, voice and airway conditions. Cochlear implant assessment requires detailed hearing tests and rehabilitation planning.

Common pathways

- Ear and hearing disorder care
- Sinus, nasal and throat surgery
- Voice and swallowing evaluation
- Cochlear implant assessment
- Head and neck lesion review

Bring for review

- Audiogram and hearing-aid history
- CT or MRI temporal bone, if performed
- ENT examination and endoscopy notes
- Speech and language assessment
- Previous surgery or infection history

Confirm device model, mapping sessions, speech therapy and long-term maintenance in the written plan.

VISION AND ORAL HEALTH

Ophthalmology and dentistry

Eye and dental treatment can often be planned in short visits, but complex surgery or medical conditions may extend the stay.

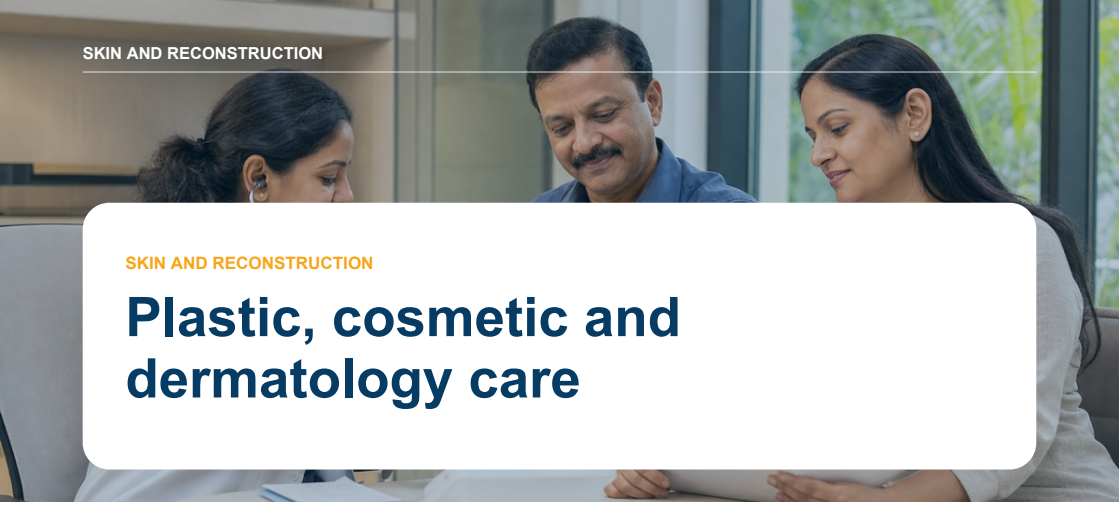

Eye pathways

- Cataract and lens surgery
- Retina and glaucoma care
- Cornea and refractive evaluation
- Eye imaging and pressure testing
- Post-operative drop and review schedule

Dental pathways

- Implants and restorative dentistry
- Oral surgery and infection care
- Smile correction and prosthodontics
- Imaging and staged treatment plans
- Healing time before final crowns or travel

Ask whether lenses, implants, prostheses, imaging, laboratory work and return visits are included.

SKIN AND RECONSTRUCTION

Plastic, cosmetic and dermatology care

Reconstructive and cosmetic plans should separate medical need, realistic goals, scars, recovery time and revision policy.

Common pathways

- Reconstructive surgery after injury or cancer
- Liposuction and body contouring
- Abdominoplasty and lip reduction
- Scar and wound care
- Medical and procedural dermatology

Questions to ask

- Who is a suitable candidate?
- Where will scars be placed?
- What garments or wound care are required?
- How long before flying or exercise?
- What is the policy for complications or revision?

Before-and-after images are not guarantees. Confirm surgeon credentials and procedure-specific risks.

ACUTE CARE

Emergency medicine and anaesthesiology

Emergency teams stabilize urgent illness or injury. Anaesthesiology assesses safety and manages pain and vital functions during procedures.

Emergency pathways

- Triage and resuscitation
- Trauma, stroke and cardiac response
- Urgent imaging and laboratory testing
- Critical care referral when needed
- Transfer or admission coordination

Pre-anaesthesia review

- Medical history and airway assessment
- Allergies and prior anaesthesia problems
- Blood thinners, diabetes drugs and supplements
- Fasting and medicine instructions
- Post-anaesthesia observation plan

For an active emergency, use the nearest emergency service. Do not wait for medical-travel coordination.

DIAGNOSTICS AND THERAPY

Radiology, laboratory and cellular services

Diagnostic departments support nearly every treatment plan. Tests should answer a clinical question and be interpreted by the treating team.

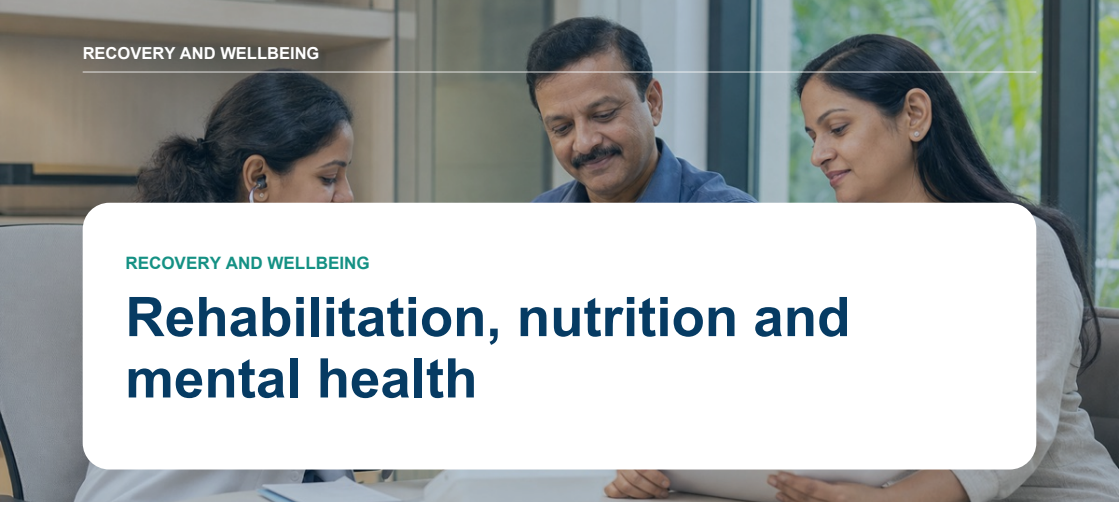

Diagnostic services

- Radiology and image-guided procedures
- Pathology and laboratory medicine
- Nuclear medicine imaging and therapy
- Cardiac and pulmonary investigations
- Pre-operative and infection screening

Blood and cellular care

- Transfusion medicine and blood-component support
- Cellular therapy coordination
- Compatibility and immunology testing
- Apheresis when clinically indicated
- Cold-chain and sample-handling requirements

Confirm whether outside images, pathology slides or samples are accepted and how they should be transported.

RECOVERY AND WELLBEING

Rehabilitation, nutrition and mental health

Recovery is part of treatment, not an afterthought. Plan mobility, nutrition, mental health and caregiver needs before admission.

Support pathways

- Physiotherapy and rehabilitation
- Nutrition assessment and therapeutic diets
- Psychology and psychiatry
- Pain and function goals
- Preventive health screening

Discharge planning

- Home exercise or therapy schedule
- Diet and fluid instructions
- Wound, catheter or device care
- Warning signs and emergency contact route
- Return-to-work, school and travel advice

Ask which follow-up services can be completed remotely after returning home.

ADVANCED TECHNIQUES

Robotic and minimally invasive surgery

Robotic, laparoscopic, endoscopic and image-guided techniques may reduce incision size in suitable cases, but they are not automatically better for every patient.

Where used

- GI and general surgery
- Urology and kidney procedures
- Gynaecologic surgery
- Orthopaedic navigation and spine procedures
- Selected head, neck and thoracic surgery

Decision factors

- Surgeon experience with the proposed technique
- Patient anatomy and previous surgery
- Conversion-to-open plan
- Special devices and consumable cost
- Expected benefit for this specific patient

Choose the procedure based on clinical suitability and team expertise, not technology labels alone.

TRANSPLANT PLANNING

Clinical, donor and legal review

Living-donor transplantation requires separate recipient and donor assessment plus authorization before surgery.

Recipient assessment

- Diagnosis, organ function and medical fitness
- Infection, cancer and cardiac screening
- Compatibility testing as directed

Donor assessment

- Independent medical and psychosocial evaluation
- Relationship and voluntary consent verification
- Anatomy and organ-function testing

Authorization

- Identity and relationship documents
- Hospital transplant committee process
- Country-specific embassy or government documents when required

After approval

- Final surgical and anaesthesia clearance
- Written package scope and contingency plan
- Follow-up, medicines and local-stay schedule

Do not book surgery or non-refundable travel until the transplant team confirms clinical suitability and required authorizations. Document requirements can change and must be verified directly with the hospital's transplant and international-patient teams.

FINANCIAL PLANNING

Read the package estimate carefully

A package is a defined scope, not a guarantee that no additional medical needs will arise.

Confirm as included

- Doctor and surgeon professional fees
- Procedure, operating room and anaesthesia
- Defined room or ICU category and number of days
- Routine medicines and consumables listed
- Specific implants, devices or blood products if named
- Included investigations and follow-up visits

Check as excluded or extra

- Extra stay, ICU escalation or complications
- Unrelated specialist consultations
- High-cost medicines, implants or special devices not named
- Additional procedures or change in treatment plan
- Post-discharge medicines, tests and accommodation
- Taxes, travel, food for companion and currency charges unless stated

Before paying

Confirm currency, validity period, cancellation or refund terms, deposit schedule, accepted payment methods and who can approve a revised estimate.

INTERNATIONAL PATIENTS

Medical travel checklist

Requirements differ by nationality, diagnosis and treatment. Verify every item before ticketing.

Travel documents

- Passport valid for the required period
- Correct medical visa and attendant visa, if applicable
- Hospital invitation or support letter
- Travel insurance and medical coverage details

Clinical records

- English translations where needed
- Original reports plus digital backups
- Medicine supply in original packaging
- Doctor contact and emergency summary

Stay and logistics

- Airport transfer and accessible transport
- Accommodation near the treating hospital
- Food, mobility and caregiver requirements
- Funds and payment method confirmed

Before departure

- Hospital appointment reconfirmed
- Fit-to-fly advice for current condition
- Vaccination or infection precautions reviewed
- Emergency plan for deterioration before travel

Passport copies and medical documents contain sensitive data. Share only through the hospital or MedTreat India channel agreed for your case.

RECOVERY PLAN

Hospital stay to safe return home

Length of stay varies. Use milestones rather than a fixed number of days to judge readiness.

Before admission

- Complete requested investigations
- Review consent, fasting and medicine instructions
- Confirm room category and attendant policy

During admission

- Ask for daily goals and expected milestones
- Track medicines, devices and rehabilitation
- Request interpreter support if needed

Before discharge

- Collect summary, prescriptions and reports
- Understand wounds, diet, activity and warning signs
- Confirm emergency contact and next review

Before flying home

- Obtain fit-to-fly advice
- Plan mobility, medicines and infection precautions
- Carry records and essential medicines in hand luggage

After return

- Share scheduled tests and updates
- Attend local or remote follow-up
- Seek urgent care for warning signs rather than waiting online

CONTACTS AND SOURCES

Plan with verified information

Hospital location, doctor roster and service availability can change. Reconfirm before travel.

Yatharth Hospital locations listed in the current directory

- Greater Noida
- Noida
- Noida Extension
- Jhansi Orchha
- Faridabad - Sector 88
- New Delhi - Model Town
- Faridabad - Sector 20
- Agra
- Gurugram - listed as forthcoming on the directory
